Kriti Bohra

Senior Product Designer

Bengaluru, India +91-9877488853 Kritibohra23@gmail.com linkedin.com/in/kriti-bohra-45a924161 kritibohra.netlify.app

Senior Product Designer with 5+ years designing B2B SaaS and AI-native products, from conversational analysts and agentic workflows to generative tools. I make complex data and AI output easy to verify, act on and trust, and I own the work end to end, from discovery research through design systems and engineering handoff.

EXPERIENCE

Pixis

Bengaluru · Jul 2022 – Oct 2026

Senior Product Designer

Apr 2025 – Oct 2026

Products: **Stellar (formerly Prism) · Adroom · Visibility**

- **Lead designer, in a team of 4, for Stellar**, Pixis's conversational AI analyst. Took it from discovery to launch across three versions (Pixis Advance, Prism, Stellar). Pixis reports **30× faster insight-to-decision** and **70% less time on campaign audits**.
- **Led discovery with 8 practitioners across 2 agencies** through interviews and live shadowing, and mapped 40+ tools in their workflow. The research reframed the brief from faster dashboards to explaining *why* performance changed.
- Designed the agent experience: scoped prompts (account plus source of truth), Answers / Steps / Sources views with visible tool calls, suggested next steps, inline Ask AI, a prompt library with auto-run, and in-product issue reporting. Also defined trust patterns used across products, such as confidence indicators and "why this recommendation" panels.
- Designed **Visibility**, which tracks brand presence across ChatGPT, Gemini, Perplexity and Claude, with competitor gap analysis and content recommendations. Pixis reports it reached **$3M ARR within 60 days**.
- Led UX for **Adroom**, Pixis's generative creative studio, adding brand-guideline guardrails and creative-fatigue alerts so teams produce on-brand ads faster.
- Mentored junior designers and ran weekly design critiques. Presented work to product, engineering and company leadership.
- Set up handoff and accessibility (WCAG 2.2) guidelines, and introduced rapid prototyping with Lovable.

Product Designer 2

Apr 2024 – Mar 2025

Products: **Rules & Workflow Automation · Alerts & Notifications · AI Co-create · User & Roles Management**

- Designed **rules and workflow automation**, a no-code if-then builder where marketers set conditions on campaign metrics (for example, pause ads when CPA crosses a target, or scale budget while ROAS holds). Rules run on a schedule across ad platforms, with ready-made templates, alerts and a log of every action taken.
- Designed **alerts and notifications** that surface performance risks and opportunities with context and a direct path to action.
- Designed **AI Co-create**, a prompt-to-ad creation flow with variant comparison.
- Designed **user and roles management**: role-based access and permissions for teams working across brands and ad accounts.
- Revamped and documented the **Pixis design system**, adding patterns for conversational and generative interfaces. This cut design iteration time by 50% and handoff time by 30%.

Product Designer

Jul 2022 – Mar 2024

Products: **Analytics & Reporting · Asset Manager · Billing Dashboard**

- Designed **analytics and reporting** for cross-channel campaign performance, turning dense data into decision-ready dashboards and reports.
- Designed the **Asset Manager** for organizing, finding and reusing creatives across channels, and the **Billing Dashboard** for spend and plan visibility.

Shardings

Product Designer

Aug 2021 – Jun 2022

- Redesigned client websites and web apps from wireframes to high-fidelity UI, working directly with clients on requirements.
- Ran user interviews and usability tests, and produced style guides and UX documentation.

SKILLS

AI product design	Conversational UX, AI agents and tool use, human-in-the-loop design, explainability and trust patterns, generative UI
Product design	Interaction design, prototyping, design systems and tokens, data visualization, information architecture, accessibility (WCAG 2.2), UX writing
Research	User interviews, contextual inquiry, usability testing, synthesis and journey mapping
Tools	Figma, FigJam, Figma Make, Framer, Maze, v0, Cursor, Lovable, Mixpanel, Hotjar, Jira, Notion
